BATHROOM

Collection

by Cosentino®

Bathroom Collection by Cosentino is a unique concept in the architectural sector, based on the use of single materials that offer superior performance and remarkable beauty.

The first of these, Silestone®, is a surface made with up to 90%* of quartz with bacteriostatic protection available in some colours and a range of more than 70 exclusive colours.

The second, Dekton, is a revolutionary ultra-compact surface with high resistance, durability and versatility of design and texture. Both are large-format products manufactured exclusively by Cosentino®.

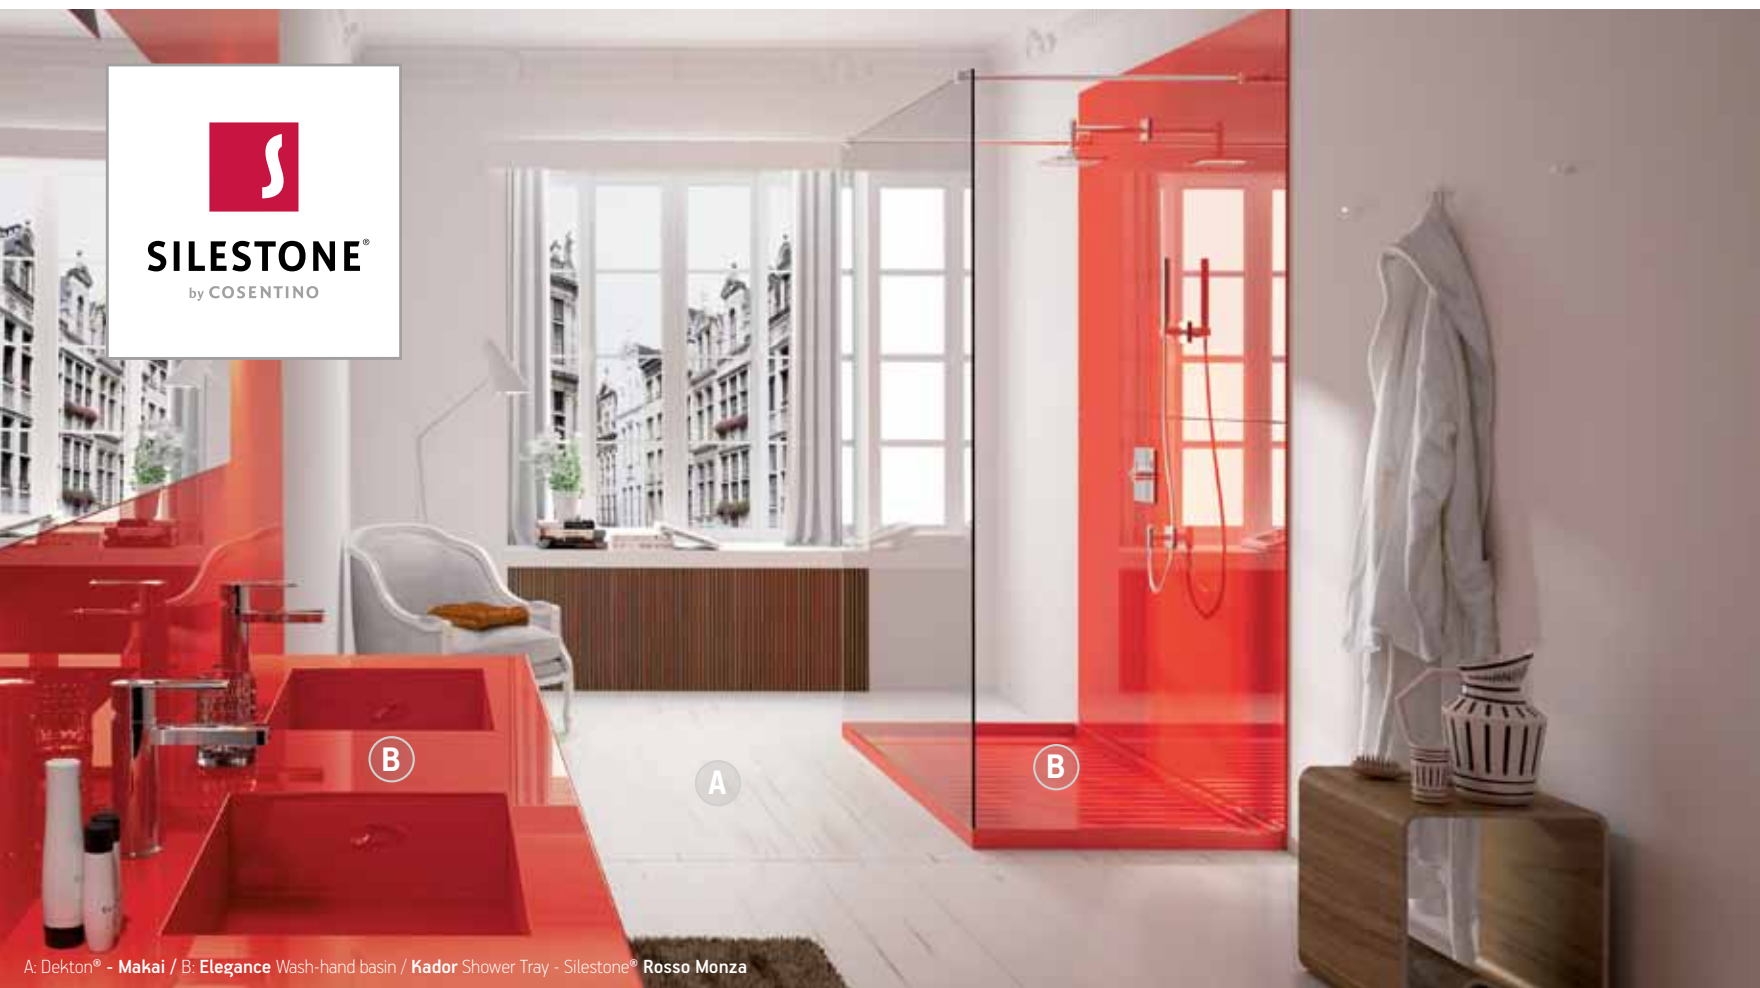

The aim of this concept is to offer architects one of the most exclusive ranges for walls and cladding with the widest choice in colours and textures. It also offers a new line in design of wash basins and shower trays made to order, based on the needs of each customer.

SILESTONE®

Natural quartz surfaces

Silestone® is the best selling natural quartz surface in the world. This is not just by chance. Silestone is used both on floors as well as on kitchen and bath walls, with as few joints as possible.

Silestone's bacteriostatic protection makes it unique in the world market; life is fuller when it is filled with colour and textures. There is an endless range of proposals with physical and chemical properties that are the result of years of ongoing research.

Bacteriostatic protection

by Silestone®

Silestone® is the only brand that incorporates an antibacterial protection system in its composition.

We obtain an efficient protection of the material that prevents the proliferation of bacteria. Silestone surfaces therefore provide extra hygiene.

*Consult colour availability

LINE COLOUR SERIES

ECO Line Colour Series

by Silestone®

ECO Line Colour Series is our quest for sustainability. We gather the waste materials that we are all surrounded by to create a product with a composition of 75% recycled materials. Glass, porcelain, vitrified ashes and even water are reused to breathe new life into something that had previously expired.

The remaining 25% are natural materials and a resin of plant origin.

SILESTONE®

Silestone is an almost unbreakable surface. It is stain-free, mark-free and scratch-free. The resistant pieces of Silestone are alive and continue to be enjoyed over time, going beyond the surface.

With a very low absorption index and a minimal number of joints, liquids are welcome in the heart of the bathroom, but not inside Silestone.

A: Dekton® - Strato

DEKTON®

Ultra-compact surfaces

Dekton® is a sophisticated combination of raw materials used to make glass, next-generation porcelains and quartz surfaces, based on an exclusive technological process (TSP) which produces an accelerated version of the metamorphic changes suffered by natural stone after being exposed to high pressures and temperatures for thousands of years.

Dekton® is pressed using a 25,000-ton press which converts the slab into a large format, extremely resistant, ultra-compact surface.

Dekton® Beyond Surfaces

Thanks to the manufacturing technology used to make Dekton®, colours and textures with varied characteristics can be obtained, from solids with outstanding purity and chromatic homogeneity and materials with veins and movements that have a very natural appearance, to bolder colour ranges or products for environments that require a more industrial appearance.

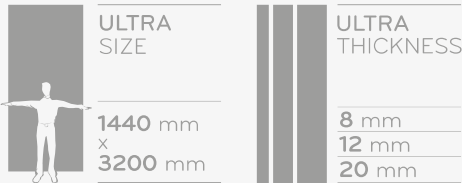

DEKTON® TSP

Sinterised Particle Technology

TSP technology emulates in a few hours what nature takes thousands of years to do, through an exclusive technological process.

TSP is a process that performs sintering on mineral particles so that they link up and change

The electron microscope can appreciate the reduced porosity of the material, due to the sintering process and exclusive ultra-compaction of Dekton. Its zero porosity and the non-existence of the microflaws that cause tension and weaknesses set DEKTON® apart from other materials.

DEKTON® ULTRA SIZE

Ultra-compact surfaces

Thanks to the size and the lightness of Dekton (320 x 1440mm), the design possibilities for kitchens, bathrooms, façades, walls or high transit floors are growing exponentially.

DEKTON® ADVANTAGES

DIFFERENT TEXTURES

HIGHLY SCRATCH- RESISTANT

STAIN- RESISTANT

MAXIMUM RESISTANCE TO FIRE AND HEAT

ABRASION- RESISTANT

RESISTANCE TO FREEZING AND THAWING

ALTA RESISTENCIA MECÁNICA

REDUCED WATER ABSORPTION

COLOUR STABILITY

DIMENSIONAL STABILITY

FIREPROOF MATERIAL

HIGH RESISTANCE TO HYDROLYSIS

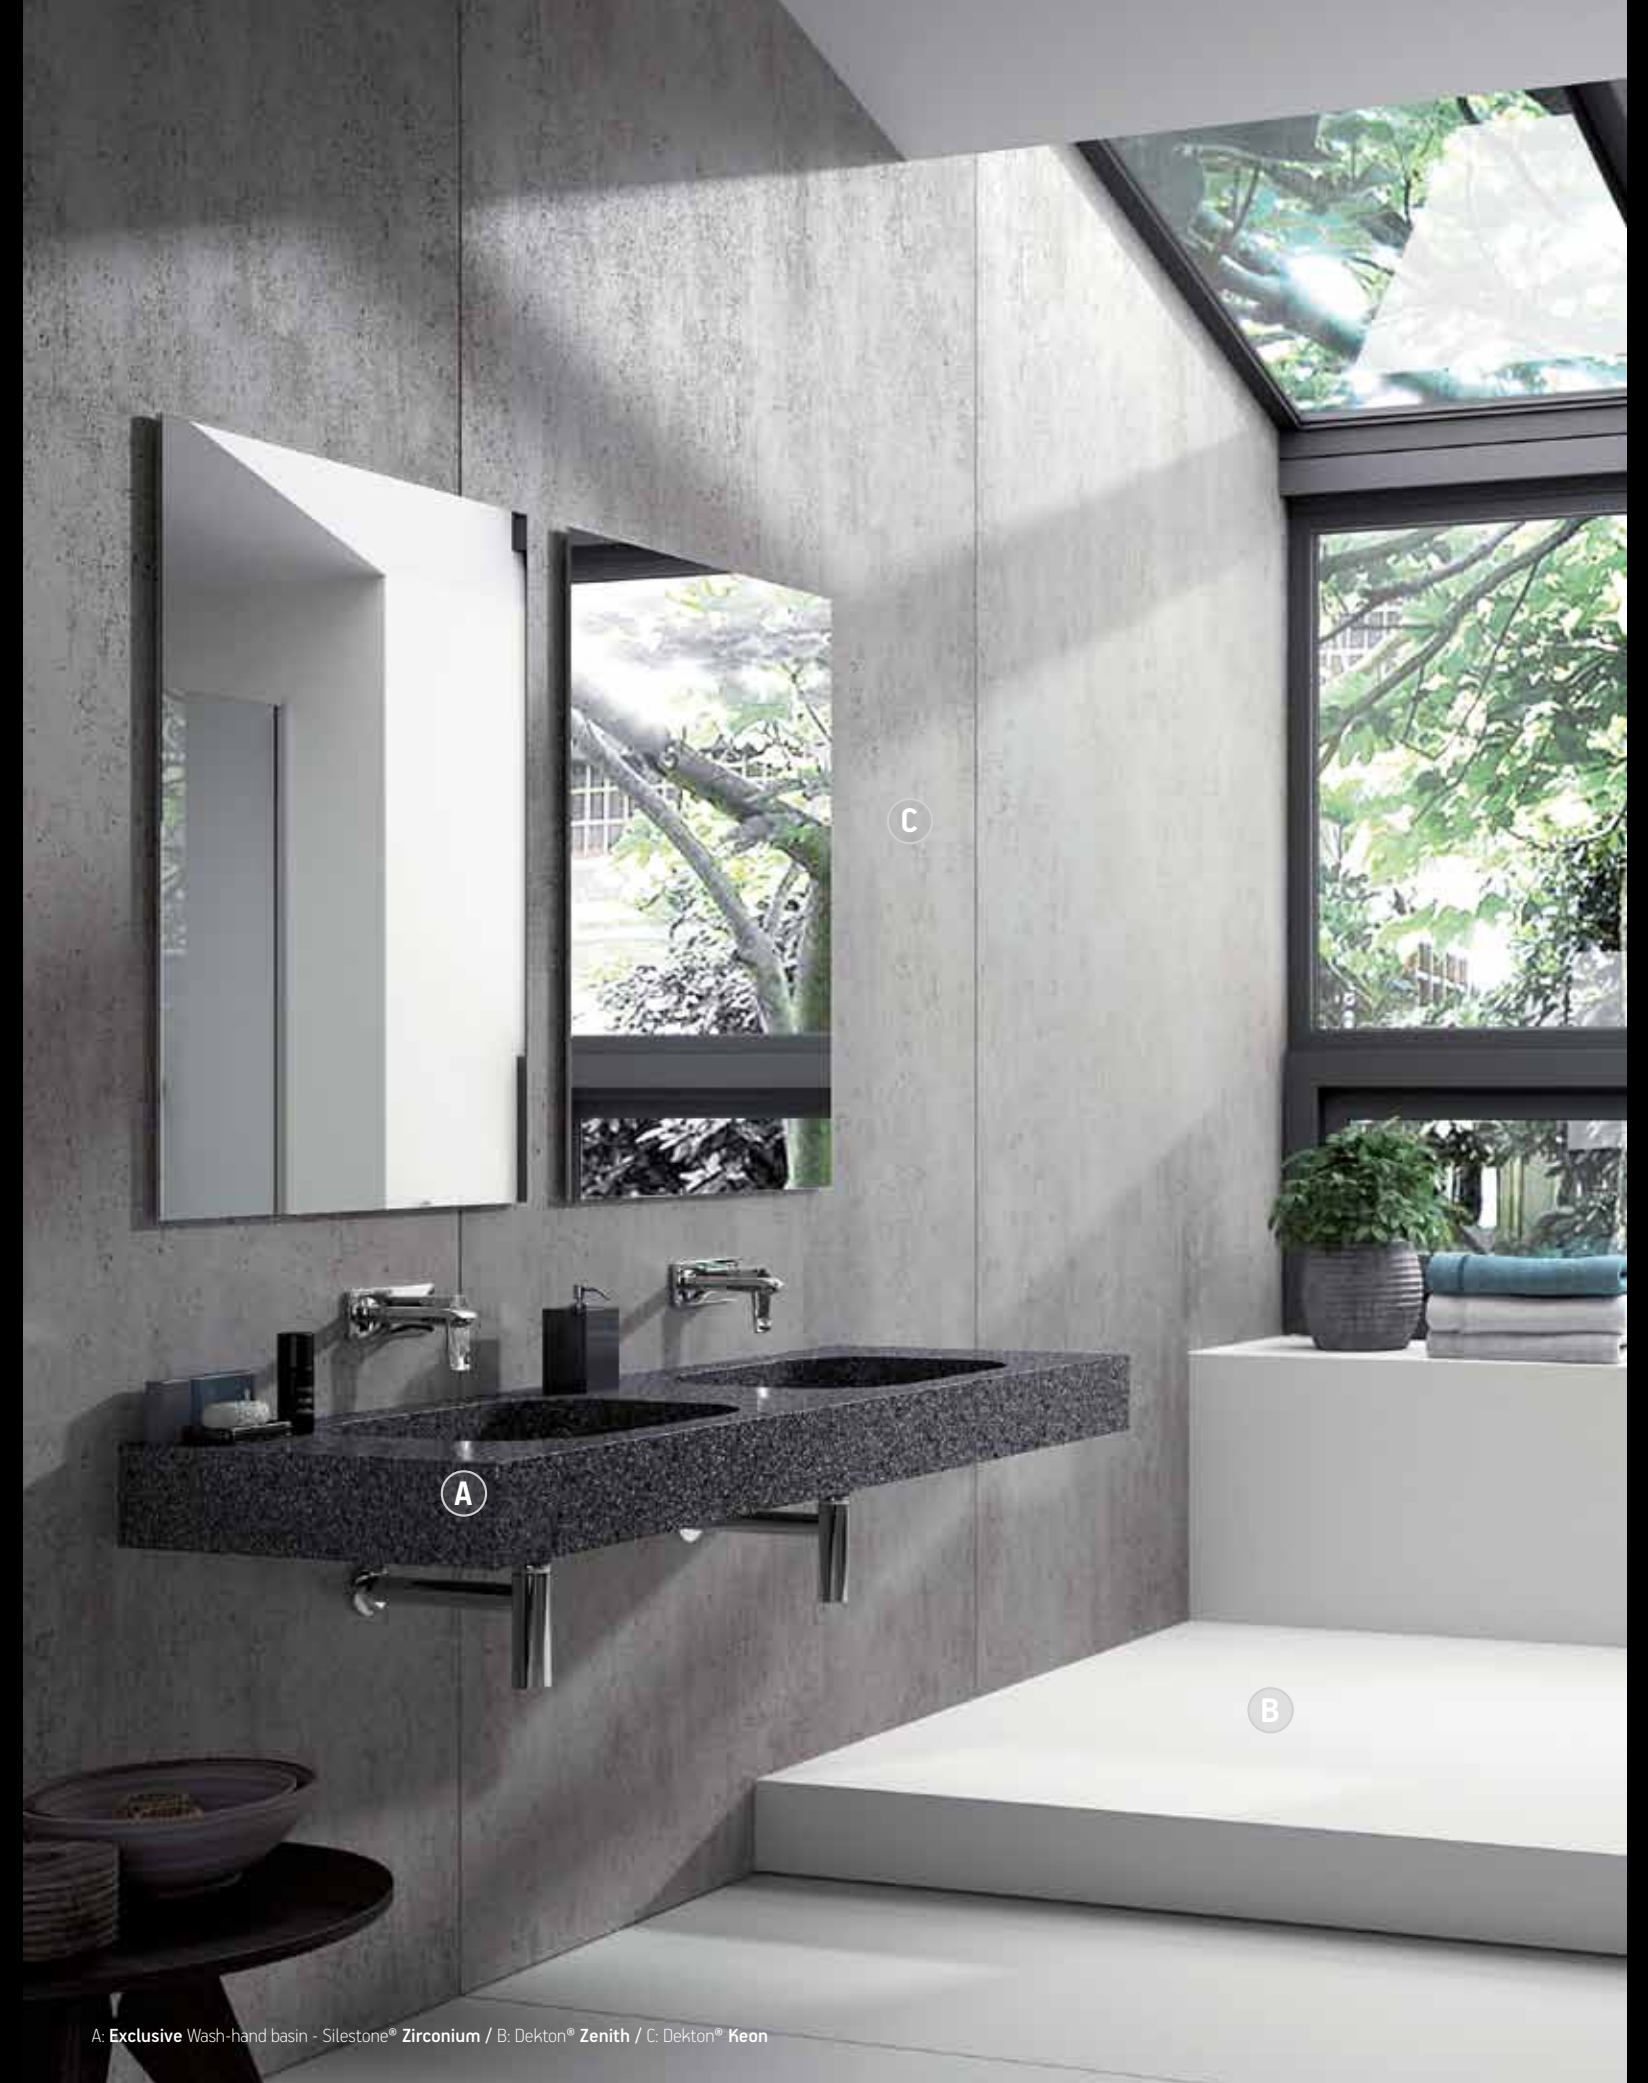

LARGE FORMAT

One of the characteristics that makes the Bath Collection by Cosentino concept unique is its large format.

All the Cosentino® materials are manufactured in slab formats of more than 3 metres long by more than 1.4 wide. This enables us to cover the bathroom area with the smallest possible number of pieces, thereby obtaining greater continuity in design and better hygiene, due to the smaller number of joints.

Thanks to this extra-large slab format, it is not difficult to make XXL tiles for wash-hand basins, shower trays or floors and walls.

CUSTOM DESIGN

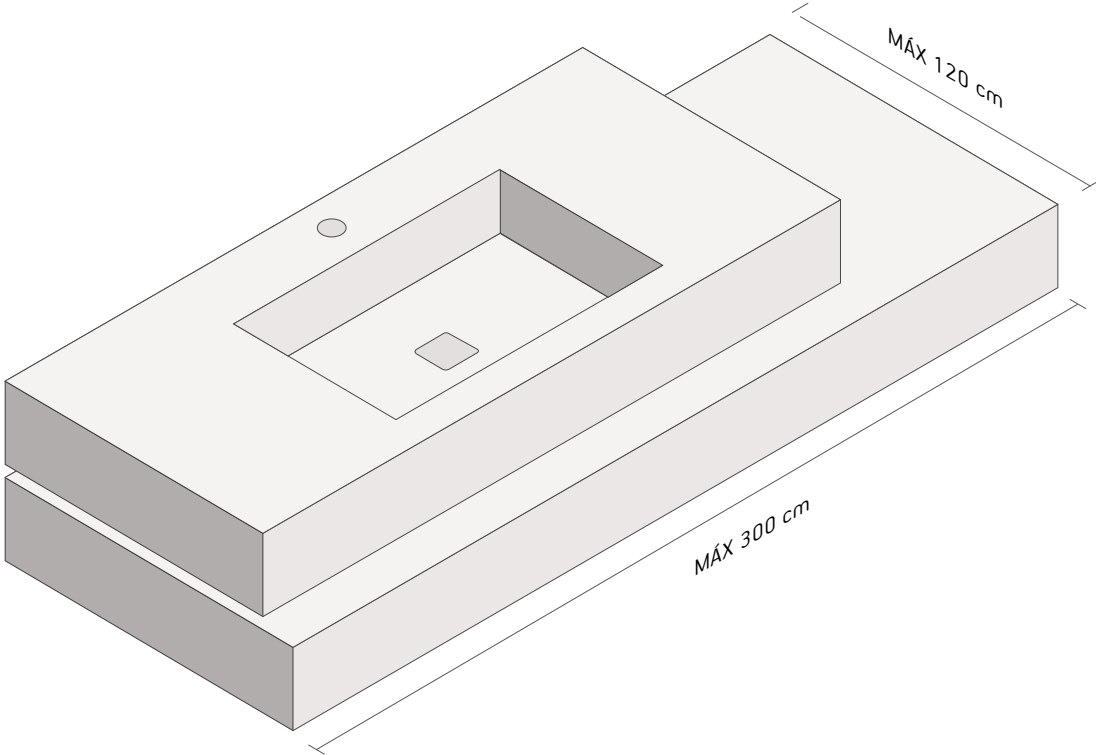

The entire Bathroom Collection is custom-made to order, in any of the 100+ Silestone, Eco or Dekton* colours, in accordance with the taste of each client.

The product is adapted to the space and needs of each client.

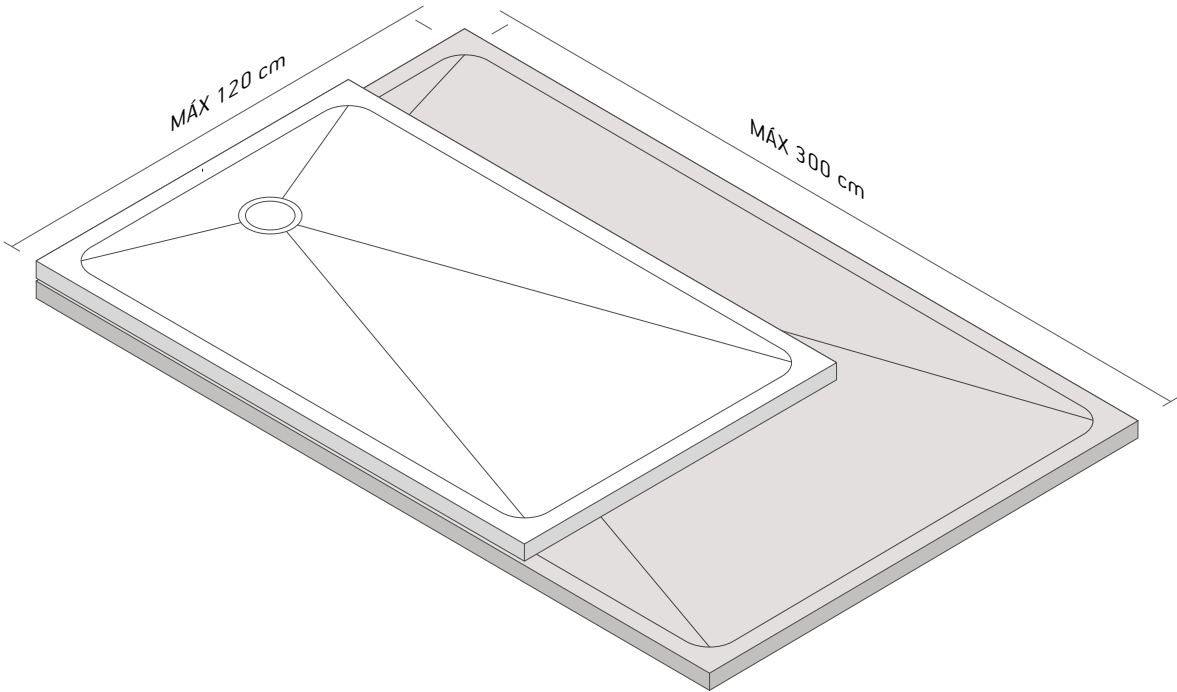

Thanks to its large format production, Cosentino® can make unique jointless tiles in lengths of more than 3 metres and widths of more than 1.5 metres. For wash-hand basins, shower trays, panelling or bathroom floors.

DESIGN AND INNOVATION

Cosentino® offers architects and designers a wide range of wash-hand basins and shower trays, placing special emphasis on distinction and exclusivity.

Architects and Designers are also invited to contribute with their experience and creativity to improve and enrich the collection with new projects and designs, which Cosentino is able to make real, thanks to its development and industrialisation capacity.

COLOUR AND HARMONY

Colour and texture take on greater importance, through exclusive materials such as Silestone® and Dekton®, which can be designed to mimic natural wood and stone and natural stone with coatings applied in modern architecture, such as oxides or microcement.

SINGULAR PROJECTS

Cosentino® Bath Collection is a combination of exclusive materials and designs, industrial capacity and the fullest customised service in the world that will convert a bathroom in a hotel, home, airport, office or shopping mall into a singular space with the power to instantly seduce users.
