STEINEL. The Original

Using energy more intelligently to provide added value for man and the environment. It is with this vision that STEINEL invented the SensorLight back in the mid-80s, making a quantum leap in lighting technology. STEINEL motion detectors and Sensor-Lights are more convenient, more reliable and far more energy-efficient than conventional lighting solutions.

This means everyone can play an active part in helping to reduce CO₂ emissions. Because using less energy is not only good for the climate; but also for the pocket.

What's more, STEINEL also boosts convenience by detecting movements and switching lights 'ON' and 'OFF' automatically – life is altogether easier and safer with intelligent technology from STEINEL.

As brand and technology leader, STEINEL excites and impresses consumers across the globe with outstanding functionality, user-friendliness, long-lasting product life and unbelievable value for money. STEINEL's high-quality products for DIYers are available from leading do-it-yourself stores. STEINEL gives a 3-year warranty on all products - impressive evidence of uncompromising quality.

XLED home 1 put to the acid test: Our splashing-water test guarantees weather resistance and IP44 rating.

For us, intelligent technology is both a challenge and a commitment. We have been developing and manufacturing our products with particular care at our own factories for over 55 years. This is also where they are tested for quality and long life. We at Steinel are proud to make sure that our products remain in proper working order year after year.

STEINEL through and through: We manufacture in-house, right down to the electronic components.

It was back in 1959 that Heinrich Wolfgang Steinel founded the STEINEL company in Herzebrock-Clarholz. Since then, STEINEL has consistently evolved from pioneer to technology and innovation leader in sensor-controlled lighting.

Innovative and intelligent products of world renown are created at our own development centres in Germany, the Czech Republic and Switzerland. All products are manufactured by company-owned factories in Germany, Romania, the Republic of Moldova and Switzerland. Made in Europe is STEINEL's recipe for success.

STEINEL products make life easier, safer and greener. For instance, intelligent STEINEL sensor technology only provides

light when it's actually needed - doing so all automatically and automatically 'OFF' when it's no longer required. This saves energy and reduces CO₂ emissions. Combining sensor technology with innovative LED lighting can even make an energy saving of up to 90 %.

Responsibility towards mankind and Mother Nature is a firm component of STEINEL production process. Meticulous attention is paid to meeting national and international guidelines in development and production. Including RoHS, the directive restricting the use of hazardous substances in electrical and electronic equipment. To us, responsibility is a commitment that's practised every day, covering every aspect of the way our company thinks and acts.

Benefits of Automatic Lighting

Light only when it's needed. Thanks to intelligent STEINEL sensor technology.

Convenience

Intelligent lighting control from Steinel makes life so much easier. You don't need to give a thought any more to using electricity in an efficient, sustainable way. Motion detectors and sensor-switched lights from STEINEL control all lights in your home automatically.

Safety and security

Intelligent lighting that detects movement automatically shows noteworthy details in the right light, illuminates the way and can guard against undesired visitors. Come rain, hail or snow, you can be sure innovative STEINEL technology won't let you down.

Saving

A key issue these days is climate protection. This is where the sustainable use of resources is closely linked with the efficient use of energy. About 19 per cent of energy used world-wide goes on lighting. This equates to an annual demand of about 2,650 terrawatt-hours. Here, the intelligent use of STEINEL sensor technology can make a huge contribution to saving energy.

Inefficient reality: light's still 'ON' even if no one is in the room.

"Daddy says intelligent lighting
is good for the whole world."

Find the right sensor
for your home.

The right solution for any application.

IS 180-2

An intelligent unit.
In form and function.

Running, hopping, romping around. Children will use any open space to play in and forget the world around them. The elegant wall-mounted IS 180-2 infrared motion sensor gives best protection against unintentional damage or accidentally being knocked off. Ideal for monitoring large properties and outdoor spaces, such as in front of the home, on driveways, in gardens or courtyards - and, being so slim, can also be mounted on non-concealed surfaces. The parallel-connectable designer wall sensor comes to you complete with corner wall mount bracket for ease of installation on external and internal corners; joined with plenty of scope for creative play.

Simply child's play.

Getting started with the classic sensor.

Are you toying with the idea of fitting a motion detector to your building? The infrared controlled IS 140-2 motion detector gives you all the benefits of a modern detector. Needless to say, we always use the very latest technology for our bestsellers too. For instance, we have given the product in its current generation even more class: larger adjustment angle, even longer reach and even better detection performance. Treat your home to intelligent sensor technology.

The sensor success story.
Still looks as stunning as ever.

Are you looking for a way to enter the world of motion detectors? The IS 130-2 infrared motion detector is a STEINEL customer favourite of recent years, not meaning that we're resting on our laurels. We've continued to optimise both its design and technology. The sensor classic is the ideal solution for monitoring areas with precision targeting in front of buildings and on driveways. It also provides excellent quality of detection and can be tailored to the specific conditions on site. The motion detector is wired up so easily and quickly, your neighbour won't even notice you installing it.

130°, 12m max.

High-tech.
Low energy.

Are you looking for an starter model? The IS 1 infrared motion detector comes with perfected technology in unadorned design. It is particularly reliable, can be mounted on the wall or ceiling and is the ideal solution for monitoring areas with precision targeting in front of buildings and on driveways. It also provides excellent quality of detection and can be tailored to the specific conditions on site. The detector is wired up so quickly and easily, there's enough time left for gardening.

IS NM 360

Perfectly combined.
Intelligence and aesthetic appeal.

The wall-mounted IS NM 360 infrared motion detector catches the eye with its unobtrusive, unique design. As it's so slim, it is ideally protected from unintentional damage and being pulled off the wall accidentally. Reliably and conveniently, its automatically switches the light 'ON' – and 'OFF' again – without actually touching it. Also, you can match the detector to your particular situation and needs: four sensor programmes with different functions to leave the light 'ON' all the time. Simply intelligent.

IS 240 DUO

You'll sleep deeply.
With peace of mind.

At night or when it's getting dark, you can rely in full on the IS 240 DUO. We have fitted the motion detector with two highly sensitive infrared detectors so it can monitor large areas for you. Mounting the detector on an outside corner gives you an added advantage: reliable, uninterrupted coverage of an area in front of two building walls. Why install two sensors if the job can be done by one? The corner wall mount bracket is included.

IS 360-3

The multi-talent for indoors and outdoors.

The infrared ceiling sensor that satisfies all demands and is really simple to install. Simply genius: sophisticated technology that is installed and configured in just a few steps thanks to a clever installation concept. Thanks to its three pyro sensors, the infrared surface-mounted sensor has an impressive 360° angle of coverage and a range of up to 12 metres. The detection zone can be set to any requirement by fitting shrouds. The IS 360-3 is available in black and white.

IS360D TRIO

Permanent coverage.
Protected all-round.

Below the balcony, in the carport, on the porch – the IS 360 D TRIO feels at home wherever it's fitted, provides uninterrupted coverage and is the ideal solution for monitoring large areas. It provides excellent quality of detection and can be tailored to the specific conditions on site. The motion detector is wired up so easily and quickly, your neighbour won't even notice you installing it.

Photo-Cell Controlled
Light for Outdoors

NightMatic 2000

Switches the light 'ON' or 'OFF'.
All automatically.

It's thundering outside and getting dark. You're sitting snugly in the living-room, waiting for your guests. Who'd want to go out and turn the outside light on? The NightMatic 2000 reliably does this for you – whether it's raining, snowing, blowing a gale or you simply have something better to do. Of course, the light-level threshold at which the sensor responds and turns the light 'ON' is defined by no other than you yourself.

NightMatic 3000 Vario

Automatically switches light 'ON' and 'OFF'.
Saving no end of energy.

Did I turn the light 'OFF'? Or did I forget to? With the NightMatic 3000 Vario, this question's not an issue any more. When it's dark it takes care of switching the outside light 'ON' and 'OFF' all by itself. But that's not all: The intelligent night-economy mode automatically switches the light 'OFF' after a programmable time and back 'ON' again in the early hours between 4 and 5 o'clock. The photo-cell controller feels most at home on your property, on the front of a building or in a shop window.

LN 1 LED

Light where it's dark.
All automatically.

So as not to leave you standing in the dark any more, we've developed an LED light with integrated photo-cell controller. The LN 1 LED combines exceptional design with intelligent technology and is ideal for permanent night-time illumination anywhere around the home.

Where and how you install the light is left to your imagination. We have designed it so that it can be installed either horizontally or vertically on the wall or ceiling - and always with effortless ease. Complete with adhesive house numbers.

Automatically ON in the evening – automatically OFF in the morning.
Our photo-cell-controlled light for lower energy costs when using existing luminaires.
The ideal solution for everyone who's fallen in love with their conventional luminaires at home. The SensorLight LED light comes in the form of a conventional light bulb and fits all E27 sockets. The integrated photo-cell controller automatically switches the LED light ON when darkness falls and OFF again in the morning.
With an LED life expectancy of 25,000 hours.

EAN SensorLight LED light, 6W	4007841 013615
Dimensions (HxW)	105x60 mm
Output	6 W
Luminous flux	489 lm
Efficiency	81.5 lm/W
Comparable incandescent lamp wattage	43 W
Beam angle	156°
EAN SensorLight LED light, 8.5W	4007841 008215
Dimensions (HxW)	117x60 mm
Output	8.5 W
Luminous flux	710 lm
Comparable incandescent lamp wattage	54 W
Efficiency	83.5 lm/W
Beam angle	138°
Power supply	220 –240V, 50Hz
Where to use	indoors and outdoors
Socket	E27
Sensor type	photo-cell controller
Colour temperature	3200K
Colour rendering	Ra ≥ 80
LED life expectancy	25,000 h
LED cooling system	Passive Thermo Control
Luminous-flux maintenance after rated life expectancy	< 50%
Possible switching cycles	50,000 xON/OFF
Time to reach 60% luminous flux	0.4 sec
Ignition time	0.4 sec
Mercury content	0 mg
Twilight setting	15 lx
IP rating	IP20
Temperature range	-20 to +40°C
Material	plastic with aluminium fitting

Here they are, the most efficient solar lights in the world.

Light without any connection to the power supply – that is the great idea behind solar lights. But it only makes sense if you can always rely on it. STEINEL XSolar lights simply work all the time – providing bright light 365 days a year. In bad weather too. Because we have managed to combine perfect components perfectly: highly efficient LEDs, precision STEINEL sensor technology, state-of-the-art lithium-iron-phosphate rechargeable batteries. When it's dark, this means you can be absolutely sure that light comes whenever it is needed – evenly illuminating up to 30 m². No matter whether it's summer or winter. This makes our XSolar lights the ideal lighting solution for house walls, carports and outdoor areas.

XSolar L-S

Solar lights that always work.
In summer as in winter.

Thought through from the very beginning. Lighting for outdoors that is produced exclusively from solar energy. Without the need for a power point. And without any costs. Seen like this, solar lights are an excellent idea. Provided, of course, they really are efficient and work reliably. For a long time, though, neither the technology nor the lighting performance of products on the market were even close to being satisfactory. Which is why they encountered problems in prolonged phases without sunlight – only to fail dismally in the

winter. We wanted to do better. Or rather: our solar lights should be perfect. After all, as technology and innovation leader, STEINEL settles for nothing less than making sure our products offer the highest quality. And total reliability. As such, we make absolutely no compromises in whatever we develop. So, we took the time to do some lengthy research. Also in close collaboration with leading scientists and committed students from universities across the globe. We scrutinised

everything, turned every single component completely upside down and did a lot of thinking outside the box. The result shows that this effort was more than worth it: STEINEL has launched a new generation of solar lights that provide the ultimate in efficiency and performance. Because they are made from components of the highest quality – from the rechargeable battery, solar panel and sensor to the lamp and high-performance processor with appropriate

software. And because we have combined these components in the most intelligent way possible. In a way that simply makes our solar lights work all the time. No matter whether the sky is blue and the sun is shining – or whether it's snowing. So they keep the consumer satisfied in every respect. Their name: XSolar.

Solar Lights for
Outdoors

No energy costs. No power connection.
No compromising, in summer as in winter.

Perfect components.
Perfectly combined.

We asked ourselves what makes a solar light the best in the world.
The answer: the ability to provide bright light whenever it's needed. 365 days a year.
In bad weather too. How we have managed to do this, you can see here.

- Monocrystalline solar panel**
- Maximum efficiency, far higher than polycrystalline or amorphous solar panels
 - Also recharges when it's cloudy

- Highly efficient LED system**
- 150 lumen at 1.2 W
 - Area of up to 30 m² brightly illuminated
 - Maximum efficiency 124 lm/W

- High-performance infrared sensor**
- 140° sensor with Fresnel lens
 - Slim-line sensor perfectly integrated in the design
 - Light only switches on in response to movement

- Lithium-iron-phosphate rechargeable battery**
- Light availability for 60 days
 - Withstands temperatures from -20°C to +40°C
 - 2500 mAh capacity

- Intelligent control**
- Patented STEINEL software
 - Permanent, automatic demand analysis
 - Allows for environmental factors
 - Dynamic control of lighting availability

XSolar L-S

No energy costs. No power connection.
No compromising.

Never again become agitated over solar lights that let you down: developing the XSolar, STEINEL now has the first solar light that always works. In technical terms, it combines the best components – from the highly efficient monocrystalline solar panel, the high-performance infrared sensor and the temperature-resistant rechargeable battery providing lighting availability for 60 days to the intelligent microprocessor control system – reliably illuminating up to 30 m² of your outdoor space with bright LED light. 365 days a year. In any weather. And zero energy costs. This makes it the smartest solution for mounting on garden walls, external walls and wherever there's no power connection available.

"Our neighbours are incredibly thrifty but have the nicest lights."

The iHF outdoor lights.
Aesthetic lighting perfectly controlled.

Stunning lighting solutions on the wall of your home.
With invisible sensor technology.

Our iHF range is synonymous with unique design, impressive lighting aesthetics, high efficiency and outstanding sensor technology. Just because the intelligent high-frequency sensor is installed completely out of view doesn't mean it is any less efficient. On the contrary: it detects people approaching from any direction and can distinguish them from small animals. And its reach can be adjusted exactly as required. Which means it only switches light on when needed – masterfully showing off your home at its best. In whichever form, in whatever direction or as LED uplight / downlight with house number.

L 810 LED iHF Uplight/Downlight

You don't see it.
But it sees you.

A high-quality product is cleverly thought through and made from materials that last. Its value also extends beyond today, it has permanency and constancy. The L 810 iHF outdoor SensorLight is an LED uplight and downlight that translates intelligent technology into form and function. For the first time, we have managed to make a light's sensor completely invisible – without compromising on first-class design and technological perfection. For stunning upward and downward lighting. Optional manual override for 4 hours.

L 820 LED iHF Uplight/Downlight with House Number

Outdoor lights beware.
Here comes the new house number.

We did some thinking, pondered, tried things out, dismissed them and got down to testing. For the most intelligent house number light we've ever made. For the first time, it has been possible to integrate the sensor in a light source so that it can't be seen. As an LED uplight and downlight, the L 820 iHF outdoor SensorLight translates intelligence into fabulous looks and technology that set off your house number like no other. In developing it, the product's future value was also important to us. Intelligent technology has a permanency and constancy about it – it is brighter, cooler and smarter. Optional manual override for 4 hours.

L 825 LED iHF Downlight

Classic outside. Futuristic inside.
iHF sensor invisible and perfect.

Some like it classic. This is why we have combined pioneering technology and customisable functionality from the iHF series with timeless design. The result – the L 825 LED iHF – brings permanent aesthetic appeal to your entrance. Only when necessary, of course: the sensor detects persons from any walking direction – and can distinguish them from small animals. And it remains completely invisible. With minimal energy consumption and the incredibly long life expectancy of the LEDs, so too are its running costs.

Lighting effects re-defined.

Sensor-Switched
LED Lights for Outdoors

L910LED

L 900 LED

For the most attractive aspects of a building.
Slim and efficient.

For everyone who understands light to be more than a source of brightness. The LED uplight stylishly illuminates the outside walls of your home with understated lighting effects. And because we not only gave it a modern design but also attached particular importance to pioneering technology and maximum efficiency when we developed it, the L 900 LED also lets you feel perfectly at ease from the aspects of ecology and economy. No matter whether you use it as basic-, permanent- or sensor-switched lighting. Including the option of switching interconnected lights on and off simultaneously.

L 910 LED

Creates the right ambience.
Elegant and intelligent.

Same technology, even more effective: if you are looking for somewhat more ambient light on the outside of your home, we can offer you an uplight/downlight solution with the L910LED that's just as stylish as it is efficient. As with its little brother, no-maintenance and low-consumption LEDs give you aesthetically pleasing ambient lighting here too whenever you wish thanks to the reliable IR sensor. And if you interconnect them, they will also switch on and off simultaneously. An effect not only appreciated by admirers of aesthetic style.

Sensor-Switched
LED Lights for Outdoors

L 630/L631 LED

Intelligent. Minimalist.
Timeless.

The L630 LED brings together sophisticated architecture and intelligent lighting in perfect style. The latest LED technology is hidden in the narrow enclosure. A light output of 663 lumens provides pleasant outdoor illumination at a power consumption of just 8.2 watts. The luminaire is controlled via an integrated infrared mini-sensor, which can be removed easily for configuring. Functions include soft light start, basic light level, night economy mode as well as the Nightmatic function. This aesthetic sensor-switched light is available in silver and anthracite.

L 265 LED

Less is more.
Cutting-edge technology attractively packaged.

There's more technology in the L 265 LED sensor-switched wall light than its exterior suggests. This high-quality light pairs state-of-the-art intelligent technology with attractive design. The innovative LED lamp evenly illuminates the glass shade The corona of LED light in the base adds an attractive lighting statement and the integrated power-LED shines down the wall when it's dark. Is your house number or your surname displayed on the wall? As usual, this light provides a wide choice settings. And as usual, these are easy to understand.

L 260 LED

House and garden.
A perfect team.

The L 260 LED designer outdoor SensorLight is not only perfect in form and function but also a matching addition to the GL 60 LED outdoor SensorLight. The LED lamp evenly illuminates the glass shade. Convenience, safety and energy efficiency from one and the same light? We make it possible. The light is incredibly easy to install and the function settings on the product are easy to understand too. Automatically and gentle on the eyes, it slowly switches the light on and off again. All by itself.

GL60 LED

Sensor-Switched
LED Lights for Outdoors

GL 60 LED

International garden show.
At your home.

Transform your property into a showcase. The modern, sleek design brings a very special mood to gardens, driveways or paths. The GL 60 LED SensorLight can tell if anyone is there and slowly switches the light on in a way that's kind on the eyes. Just as with the L260LED, it also incorporates the innovative LED lamp. It provides lighting filled with atmosphere and automatically switches itself off again after a pre-selected time. 360° coverage without blind spots, incidentally, is unique. Your neighbours will be amazed.

L 220/L 224 LED

Squaring light.
Simple solution - powerful effect.

The L 220/224 LED sensor-switched outdoor lights brighten every entrance with a modern look and soft ambient lighting. The square lights provide optimum illumination thanks to modern LED technology and a light output of up to 550 lumens at a power consumption of 7.5 watts. The integrated sensor detects reliably with an angle of coverage of 180° and switches the light on and off automatically. The L 220 LED has a large front panel as the ideal surface for affixing the house numbers included.

Sensor-Switched Lights
for Outdoors

L 20

Modern design for your home's exterior.
In timeless perfection.

The L 20 outdoor SensorLight provides attractive, even illumination. With its sleek-looking design and the inviting ambience it creates, this light is the ideal choice for driveways, exterior walls or side entrances. Its modern look and generous, adjustable detection zone make it a veritable highlight on any building while also saving huge amounts of energy. Incidentally, it's so quick and easy to install. Your neighbour won't even notice.

High-quality designer trim panel in stainless steel

Modern design for a bright future.
The attractively priced gateway to the world of automatic lighting.
Inviting appearance, proven technology: whether at the entrance, next to the building or on the patio - the L 22 sensor-switched outdoor light scores with clean lines and reliable STEINEL sensor technology. The light features a rustproof stainless-steel trim and, thanks to its translucent housing, provides inviting and evenly spread ambient lighting. Practical: the sensor and light diffuser are made of impact-resistant polycarbonate. With an E27 socket for filament light bulbs, low-energy lamps or LED lamps.

L 585 S

An individualist.

Standing out on its own.

It's already dark when you get home. The light at the front door switches on automatically, illuminates your way and you immediately find your key. The technology has become intelligent. All made possible by the new sensor technology in this advanced light that only switches on when light is actually needed. The built-in sensor can tell whether anyone is present in the detection zone and switches the light on automatically. The attractive, lowered lampholder now also lets you use modern lamps. Reliably and stylishly illuminating the outside of your property with even, energy-saving light. Night after night.

Everything was better in the good old days.
Well, almost everything.
We've given a touch of those past times to the L 15 wall SensorLight. Nowadays however, outdoor lights only come 'ON' when light is actually needed. The sensor can tell whether anyone's present in the detection zone and automatically switches light 'ON' and 'OFF' again. The light combines cutting-edge technology with classic design and is also extremely energy-efficient. In a nutshell: energy savings, convenience, safety and security. Guess that's everything else but yesterday.

Sensor-Switched
Floodlights for Outdoors

"Seeing and being seen starts in our
back garden."

XLED home 2 –
the best XLED home floodlight we have ever made.

How can you improve a best seller? This is the question we asked ourselves and invited our engineers and developers not only to enhance the successful range of floodlights but to give it a new edge. The result is the newly developed LED panel with its LEDs behind an opal cover. This way, wide-area lighting can be produced without affecting radiance. The freely swivelling panel can be positioned to suit any lighting situation. The panel's cooling system is made of HCMC (high thermal conductivity magnesium composite), a high-performance material from the aerospace industry which, despite its low weight, dissipates heat perfectly, minimising heat build-up and maximising the life expectancy of the LEDs. This material has reduced the weight of the floodlight to such an extent that it makes it very easy to install and also suitable for mounting on composite thermal insulation system (CTIS) walls without a problem. Use of the latest infrared sensor technology enhances performance while also providing better security and energy efficiency.

In short: state-of-the-art, energy-saving lighting and sensor technology that meets the most exacting demands on design and perfectly illuminates every last corner.

Sensor-Switched
Floodlights for Outdoors

XLED home2

XLED home2 XL

Big Brother.
Day-bright light for large areas.

The powerful XLED home 2 XL sensor-switched outdoor floodlight is the first choice for those who like it particularly bright or need to illuminate large areas. Innovative, highly efficient LEDs ensure the perfect illumination of driveways, courtyards and gardens. With an energy consumption of just 20 watts. The XLED home 2 XL is also a moving wonder. The fully swivelling LED panel ensures maximum flexibility. In combination with the opal cover, the floodlight ensures optimum lighting conditions around the home with a colour temperature of 4000 K. The XLED home 2 XL is available as an individual floodlight or as a slave version. Available in white, black, graphite and silver.

XLED home2 XL SL

Lights up like crazy.

The XL lighting solution for the ultimate in powerful lighting.

Big, bigger, XLED home 2 XL SL – this is the conclusive way to illuminate large areas! Whether single floodlight or interconnected: the 4000 K power floodlight definitely sheds light on the matter and is an effective deterrent to uninvited visitors. Never failing to bathe driveways, courtyards and gardens in perfect light. And it only uses 20 watts of energy to do so! This floodlight with opal diffuser provides perfect illumination all around the building. And a sense of security and peace of mind. Available in white, black, graphite and silver.

XLED home2

The evolution of a success story.

The moveable sensor-switched outdoor floodlight with fully swivelling LED panel in a classy opal look. The XLED home 2 sensor-switched floodlight comes in a sophisticated design. It is not just an eye-catcher, but also a truly talented mover. Thanks to the fully swivelling LED panel, every corner of the entrance area can be illuminated flexibly and as required. The highly efficient LED technology coupled with the opal cover provides maximum lighting comfort. As an individual floodlight or interconnected with the slave version, the innovative new generation of the XLED home success series is available in white, black, graphite and silver.

XLED home2 SL

Combined illumination.

The ideal lighting partner for the best in lighting design.

Form and function in perfection! The XLED home 2 sensor-switched floodlight not only comes in a high-quality look. It also impresses with excellent performance. The outdoor floodlight without sensor can easily be interconnected and provides perfect lighting that reaches into the very last corner of any property with its fully swivelling LED panel made of opal glass. And as a single floodlight combined with a sensor, the attractive motion-detecting talent does a great job too. The XLED home 2 SL is available in white, black, graphite and silver.

XLED home3

Floodlight for your home game.
Day-bright light over 300 m².

Daylight off, LED floodlight on. The XLED home 3 sensor-switched LED floodlight with 330 LEDs provides stage-worthy illumination for driveways, courtyards and gardens. And all with sensation-ally low energy consumption. Economical 20 W LEDs replace 300 W halogen lights. The most powerful LED floodlight emits only a fraction of the heat that conventional halogen floodlights do which means they can also be installed without any issues under porches. The patented STEINEL HCMC cooling system additionally protects the floodlight from overheating. This is how the light cannon works even under permanent fire.

XLED home3 SL

Power LED floodlight.
Solo or team-player.

330 LEDs for day-bright illumination outside your home. Our most powerful LED floodlight is also available without a sensor – but with the same output. The XLED home 3 SL provides the key to intelligently extending your floodlight system for perfectly illuminating even more space. Needless to say, you can also use the power floodlight on its own. Whichever way: electricity costs are always minimal. Just as heat build-up – thanks to the HCMC cooling system.

XLED home 1

Top seller.
Now 25% more light for the same amount of electricity.

The XLED home 1 sensor-switched floodlight with its perfect looks and illumination takes care of your security while using a sensationally low amount of energy. Whether interconnected or used on its own, the powerful floodlight makes your property as bright as day. Because the economical 14.8 W LEDs replace 150 W of halogen light. Benefiting from STEINEL's patented HCMC cooling system, the floodlight gives off hardly any heat which means it can be installed without an issue under roofs and porches.

XLED curved

Attractive buildings need attractive floodlights.
The compact and powerful sensor-switched LED floodlight for medium-sized areas.
The XLED curved is ideal for illuminating building entrances and pathways. Yet the practical floodlight does not only satisfy safety and security needs. It can also be used to create modern accent lighting. Both the sensor and the entire outdoor floodlight come in a pleasingly understated, unobtrusive look, clearly leaving centre stage to the lighting in setting off buildings and outdoor areas with masterful proficiency.

XLED slim

En vogue.
The radiant accessory for your home.

Both floodlight and luminaire: the elegant cross-over solution for the outwardly presented sides of a building. The economical sensor-switched XLED slim floodlight puts the focus on lighting. This stylish lighting solution captivates with its elegant design and automatically provides attractive illumination for building entrances and pathways. The XLED slim makes attractive lighting statements on building facades that not only look good but also ensure that you get home safely thanks to the integrated sensor. An elegant statement of modern, timeless taste.

"That's the way it should be. A light that turns me on and not the other way round."

Sensor-Switched Lights for Indoors

Discover intelligent lighting, e.g. for corridors, stairwells, bathrooms, basements or garages. STEINEL indoor sensor-switched lights reliably and automatically switch the light 'ON' and 'OFF' again after a preselected time. For you, this means a high level of convenience, safety and security as well as energy efficiency from intelligent technology.

RS 16 LED

Evolution of a classic.

Technology leap for one of our most popular and cost efficient sensor-switched indoor lights. The latest LED technology, high-frequency sensor and interconnectability launches the RS 16 LED into a new dimension of convenience. With a light output of 940 lumens and a consumption of just 9,5 W, this luminaire uses up to 90% less electricity. The sleek design is particularly suitable for corridors, hallways or stairwells. The plastic cover provides an atmospheric light diffusion.

STEINEL

RS 16 LED

This luminaire contains built-in LED lamps.

The lamp cannot be changed in the luminaire.

874/2012

Corridor and Stairwell Light
FRS 20 LED

Our talented all-rounder.
Slim and versatile.

In developing the FRS 20 LED service and utility room light, we set ourselves the target of producing a light that reliably does its job in all sorts of different applications. Product perfection for the garage, basement or boiler room. The SensorLight in impact-resistant material works regardless of temperature, reliably detecting any movement without frequency of operation affecting lamp life.

Intelligent solution.
Intuitive operation.

Whatever we develop: it is always with the aim of finding the most intelligent solution. For our high-end sensor-switched lights in just the same way as for our simpler products. Our new TurnMeLight is the best proof. We asked ourselves what the perfect light needs to be like. Our answer: it should only shine at night, use as little electricity as possible, come in a modern, discreet design and provide pleasant light in an intensity that children can easily change. Using a very easy principle: unplug, turn through 180 degrees, plug back in again, done.

RS 16 L

RS 100L

Practical design.
Even illumination.

The RS 100 L sensor-switched indoor light brings pleasant, even light to your home. Its sleek, minimalist design makes it particularly suitable for corridors, hallway or stairwells and the hand-blown glass shade distributes light for illumination that's full of atmosphere. Involving no screws, the glass shade is held in place by a bayonet catch making bulb replacement a breeze. You simply replace the old bulb without the need for tools. By the way, you can mount the light either on the ceiling or on the wall, or do both.

Motion Detectors
for Indoors

HF360UP/AP

Motion detector brimming with technology.
Intelligent light switch.

On the way to the washing machine in the utility room, washing basket under arm, phone at ear. Reliably and conveniently, the HF 360 UP automatically switches the light 'ON' and 'OFF' again as soon as you leave the room. The intelligent switch is particularly good for corridors, stairwells, utilities and other service rooms. Using it to replace your conventional switches is as easy as putting icing to a cake.

IR 180 UP/AP

Hands full?
Step into the light.

You come home from the supermarket and are get the shopping out of the car. Arms full, you take it into the pantry. Reliably, conveniently and without the need to touch it, the IR 180 UP automatically switches the light 'ON' and 'OFF' again as soon as you leave the room. The intelligent switch is particularly good for corridors, kitchens, guest WCs and other service rooms. Incidentally, installation couldn't be easier. Using it to replace your conventional switches is as easy as putting icing to a cake.

Smart Friends.

An alliance for intelligent, interconnected technology in the household - very simple to install.

Four strong brands combine their expertise.

Thanks to Smart Friends, everybody can equip their home with intelligent technology. The Smart Friends Box is the heart of the system. It is connected to the WiFi router and communicates wirelessly with the individual system components.

STEINEL sensor-switched lights and floodlights become part of an intuitively operated and extremely secure smart home system thanks to Smart Friends. Through this cooperation with strong brand partners, STEINEL is forging new paths in the control of functions around the home. Alongside STEINEL products, PAULMANN indoor lights, SCHELLENBERG roller-shutter and awning motors as well as ABUS alarm systems can be interconnected and controlled via smartphone or tablet very easily.

Option 1: Lights and sensors from Steinel.

Ready for Smart Friends! For anybody wanting the option in future of interconnecting sensor-controlled lighting the easy way. In our example, the sensor is located on the outside wall of the home. This detects vehicles or people approaching the front door. The outdoor light next to the front door and the floodlight opposite are switched ON and OFF via a cable connection. The high-frequency indoor light from STEINEL directly behind the front door illuminates the hallway as soon as it is entered. This provides greater safety and adds convenience.

With this option, these STEINEL products are used autonomously and, initially, without a Smart Friends Box.

Sensor-switched lights and sensors
Proven STEINEL products equipped with the Smart Friends technology are the perfect components for lighting control and sensor information.

Option 2: Lighting management in and around the building, from basement to roof.

To interconnect the lighting in and around the home intelligently, the STEINEL products are connected wirelessly via the Smart Friends Box. The chosen lighting scenarios can then be controlled from anywhere conveniently and intuitively via tablet or smartphone. The building's lighting management system is now ready to start.

App control via the Smart Friends box
With the Smart Friends app (Android and iOS), standard smartphones and/or tablets can be used as a convenient way of controlling lighting from anywhere in the world.

Option 3: Automation of the entire home

The expansion potential of the Smart Friends system is impressive. Alongside lighting, Smart Friends partner products can be used for controlling roller shutters, alarm systems, heating thermostats and much more. The system has been developed in such a way that it can be configured simply and safely by any ambitious non-specialist.

Smart Friends. Stars of the STEINEL range with cutting-edge interconnection technology.

STEINEL has opted for the Z-wave wireless standard for its Smart Home products. This means that all STEINEL Smart Home products can also be used without a problem in all other Smart Home systems that use the Z-wave wireless standard.

Motion detector IS 140-2 Z-Wave

Technical specifications
 Dimensions: (HxWxD) 70x86x95 mm
 Power supply: 230 – 240 V, 50 Hz
 Sensor type: passive infrared
 Suitable for use: indoors and outdoors
 Mounting: wall
 Output: max. 2000 W (resistive load), max. 6 fluorescent lamps / LED lamps C ≤ 132 µF
 Detection angle: 140° with sneak-by guard
 Swivelling range: 180°
 Tilting range: 90°

Reach: max. 14 m (temperature-stabilised)
 Twilight setting: 2 – 2,000 lx
 Time setting*: 8 sec – 35 min
 IP rating: IP54
 Protection class II
 Accessory: including surface mounting adapter

Sensor technology:
Infrared (IR)

Heat radiated from the human body
A person's body heat gives off infrared radiation. Infrared sensor technology uses this radiation to identify movements and respond to them accordingly.

Segment lenses

How does it work:
The heart of infrared sensor technology is what's known as a pyro sensor. This electronic module responds to a change in infrared heat radiated inside its detection zone, i.e. when anyone enters the areas it is watching over. The system converts the resultant surge in voltage into an electronic pulse that activates the light.

Fresnel lenses are made up of many single lenses arranged in a circular segment. They have a maximum angle of coverage of 180°. An additional "window" also watches over the area below the main detection zone, making it virtually impossible to creep past underneath the sensors without being detected.

To look at, STEINEL multi-lenses are reminiscent of a house fly's compound eye and watch over every inch of space with their semi-spherical detection zone. STEINEL's multi-lens technology provides the best possible optics for motion detectors with double or triple-sensor system covering angles of 180° to 360°.

The STEINEL mini-sensor is small, unobtrusive and easy to remove. Function programs geared to practical needs can be set from above.

Application - Indoors and Outdoors

Reach

Tangential and radial reach
STEINEL infrared sensors come with a reach that is determined by the direction of movement. Average reach is approx. 12 m for tangential movements (parallel to the sensor). This is shorter for radial movements (towards the sensor).

Basic settings

Adjustment range
STEINEL sensors with a coverage angle of less than 360° are equipped with lenses that can be tilted and turned for exact adjustment to the situation at the point of installation.

Shrouds
All sensors come with shrouds that can be cut to size for limiting detection zones in any chosen way (e.g. next to neighbouring property / roads).

Twilight setting
A control dial can be used for infinitely varying brightness threshold from 2 lux (night) to 2000 lux (day). This prevents light from coming 'ON' unnecessarily during the day.

Time setting
Adjustable to any period from 5 seconds to 15 minutes to suit specific needs. After detecting movement, the light stays 'ON' for the period selected.

Sensor technology: High-frequency (HF)

The high-tech sensors emit signals at a frequency of 5.8 GHz (one thousandth of a mobile phone's) that can even pass through glass and stud walls completely unhindered. These signals echo off the surroundings and return to the sensor. If a movement in the detection zone changes the echo pattern, the sensor responds and switches the light 'ON' in fractions of a second.

STEINEL high-frequency sensors detect movements irrespectively of body temperature and direction of movement. They provide complete coverage and switch light 'ON' instantly. Integrated into the light to leave them invisible from the outside, lights can be created in particularly attractive designs, especially for indoors.

STEINEL high-frequency sensor-switched lights detect even the tiniest movement through 360° and at a distance of up to 8 m. The reach setting can be infinitely varied and reduced down to 1 m. So that light only comes 'ON' when it's needed, the ambient light-level setting can also be infinitely varied at which you want the SensorLight to be activated. While it's still light, at dusk or when it gets dark. The light switches 'OFF' automatically after any selectable period (e.g. 5 sec. - 15 min.).

Application - Indoors

Sensor Technology: Intelligent high-frequency technology (iHF) now for the first time in outdoors lights too

The iHF range impresses with a world first. For the first time, it has been possible to make the sensor in outdoor lights completely invisible. High-frequency sensor technology ensures that persons are detected with perfect precision.

For the first time ever, disturbances such as wind, leaves, rain, snow and the like are now masked out. That's a world first!

LED – the light of the future

Maximise savings. No need to change a bulb ever again.
This is where economics and ecology go hand in hand.

Brighter

LEDs are far brighter than other lamps - and use less energy.

Cooler

STEINEL has developed a unique cooling system to protect LEDs from overheating. This means they can reach a genuine life expectancy of 30 years and more.

Smarter

STEINEL's precision sensor technology makes sure that light is only switched on when it's actually needed. Combined with cutting-edge LED lighting, this reduces energy consumption by as much as 90%.

All about Lighting

Bright minds choose the right lamp once they are familiar with a few lighting terms.

Colour temperature: the colour temperature, or also light colour, is expressed in kelvin (K) and denotes whether white light is warm and yellowy or cool and bluish. Warm-white light is like late daylight, it looks welcoming and relaxing. Neutral white light has an activating effect, daylight white improves concentration. Colour temperatures up to 3500K are referred to as being warm white, from 3500K as being neutral white and from 5400K as being cool white.

Electrical output in watts (W) and lumens (lm)

Lumen: (lm) is the unit of luminous flux, being the total amount of light given off by a lamp radiating in all directions. Lumens show what brightness to expect far more clearly than wattage (W).

Comparison watts (W) with lumens (lm)

Incandescent lamp	24 W	40 W	60 W	75 W		
Halogen lamp	18 W	28 W	42 W	53 W		
Lumen (lm) = brightness	150 lm 	300 lm 	450 lm 	600 lm 	750 lm 	900 lm 
Low-energy lamp	6–7 W	8–9 W	13–14 W	15–18 W		
LED	2 W	4 W	6 W	8 W		

Values without light shade or diffuser

Energy-efficiency class: Energy efficiency is calculated from light output (luminous flux, measured in lumens) for power consumed in watts. A denotes a very high, G a very low level of energy efficiency.

You will find the energy label for downloading at www.steinell.de/energieeffizienzklassen

Example of lights

Example of lamps

Meaning of Symbols.

The key features of our products are indicated in the form of symbols. These are shown on catalog and web product pages as well as on packaging.

Sensor system

Detection zone
Indicates the angle at which the sensor detects movements.

Reach
Maximum distance at which it is possible to detect movements traversing the sensor.

Photo-cell controller
Automatically switches light 'ON' at night and 'OFF' again in the morning.

Installation

Mounting height
Observing the ideal installation height guarantees optimum sensor operation.

Indoors / outdoors
Light / sensor suitable for use indoors or outdoors.

Corner wall mount
Including corner bracket for attaching to building corners.

Operation

Floodlight turns
Indicates the floodlight's swivelling range.

Sensor swivel options
Indicates the sensor's swivel adjustment range.

Twilight setting
The sensor is activated when ambient light falls below the selected light level threshold.

Time setting
Selectable time for which the light stays 'ON' after detecting a movement.

Manually operated
Light / load can be switched to stay on and off directly on the sensor for up to 4 hours.

Interconnectable
Optimum adjustment to situation by interconnecting several lights / sensors by hard wire.

Light / LED

Output
For lights: the max. output of the lamp. For sensors: max. resistive switching load.

LED lighting system
This light is equipped with a STEINEL LED lighting system.

Colour temperature
Unit: kelvin. Shows whether light is warm white (yellowy) or neutral white (bluish).

Uplight/downlight
Light shines up and down or down only.

Manual override (permanent light)
Can be operated from a connected light switch. Maximum 4 hours.

Soft light start
The innovative soft light start elegantly and gently turns the lamp up to or down from 100% output.

Material

Weatherproof
Splashproof. Suitable for outdoor use.

Suitable for rooms exposed to moisture
For use in bathrooms, laundry rooms, swimming pools.

Dust-proof and splash-proof
No harmful dust deposits. Splash-proof in all directions.

Dust-proof and impervious to water spray
Completely dust-proof. Protection against moderately powerful water jets.

Impact resistance
The European standard for enclosures states the IK protection rating for impact resistance. IK07 equates to 2 joules (500 g from 40 cm).

Quality promise

Functional warranty
Valid from the date of purchase. No quibbles.

In-house development
All STEINEL products are developed in Germany or Switzerland and made in Europe.

Energy-saving
Light only when it's really needed.

STEINEL Brand

- STEINEL has been specialising in sensor technology for 30 years
- German engineering
- Produced in Europe

STEINEL Warranty

Everything we sell is not only developed in-house, but made by us too. And only in Europe.
We also check every STEINEL product for perfect working order before it leaves the factory. This way, we can guarantee the origin, perfect quality and long life of every product we deliver. With this in mind, we send out a signal that's seen nowhere else in the industry: a 3-year functional warranty on all products from STEINEL.

Certified Quality

For us, it goes without saying that all products from STEINEL comply with European safety standards. Despite involving a huge effort and not always easy from a technical point of view, we are never deterred. Because it is all worth it.
So you get certified quality – every step of the way.

Needless to say, our management system holds certification under Quality Standard DIN EN ISO 9001 and Environmental Management Systems Standard DIN EN ISO 14001

STEINEL Customer Service

Simply Consumer-Friendly.
Our Packaging.

A powerful brand powerfully packaged.

The new STEINEL product boxes get straight to the point, both informatively and emotionally. Consumers see the light the moment they set eyes on a product: The front of the packaging presents the product and purchase-clinching features in a modern, eye-catching look. Images illustrating usage on the side panels and surface give the particular STEINEL product an authentic feel of what it's like to own and use it. The rear panel shows the main technical attributes in the form of self-explanatory pictograms and 3D illustrations. In short: In their new packagings, STEINEL products speak for themselves. Doing so in 26 languages.

From Germany right across the globe –
STEINEL is at home in the world. We speak
to our mutual customers in 26 languages.

STEINEL brand displays with cleverly designed shelf presentation systems make consumers see the light and get things moving.

High-quality sample presentations and a wealth of sales boosting details are the marks that identify the new brand appearance.

Intelligent lighting effectively displayed.

The new XLED home 2 on 1 x 1.25m

Indoor and outdoor lights including overhead sample products on 5 x 1.25 m

Enlightenment at first glance. Shelf display for STEINEL sensor-switched lights and motion detectors for outdoors.

Everything in view and ready to hand. The sample display invites consumers to take a look and stand in amazement. This makes prospective purchasers quite literally "grasp" first-class product quality.

Using selected product groups to address the emotions provides valuable inspiration.

Collating individual product groups to create well-structured, theme-based placements with images that speak to the emotions grabs attention and generates impulsive buying.

STEINEL secondary placements.

Slim-line, flexible, sales-boosting.

A practical pallet system for any situation – ideal for product launches, sales promotions or selling off surplus stock. With the easy-fit top-mounted labels, these pallets can be individualised to suit any occasion in no time at all. Nothing is lost of the consistent and aesthetically pleasing look of STEINEL brand displays.

IP Ratings

IP protection rating

The IP rating classifies the level of protection provided by enclosures and covers used for protecting electrical equipment. The IP rating is defined under IEC 529, EN 60529, DIN VDE 0470-1 and NF C 20-010. The protection ratings are defined by the letters IP (International Protection) followed by two digits indicating the degree of protection. This means that the full protection rating consists of the two letters and the digits indicating the level of protection.

1st digit

Protection of equipment against the ingress of solid, foreign objects and also protection of persons against contact with hazardous parts.

2nd digit

Protection of equipment against the harmful ingress of water.

Where there is no protection rating - with regard to one of the criteria - the digit is replaced with the letter X, e.g. IP X4 or IP 6X.

1st digit	Protection against ingress of foreign objects	Protection against contact/application
0	Equipment provides no protection against ingress of solid, foreign objects.	No particular personal protection against accidental contact with live and/or moving parts. In enclosures with no access.
1	Protection against ingress of solid, foreign objects in a diameter > 50 mm.	Protection against accidental contact by large surfaces of the body (back of the hand) with live and/or moving parts. Closed areas only accessible to authorised and trained personnel.
2	Protection against ingress of solid, foreign objects in a diameter > 12.5 mm.	Protection against finger contact with live and/or internal moving parts. Specific accessible areas.
3	Protection against ingress of solid, foreign objects in a diameter > 2.5 mm.	Protection against contact between live and/or internal moving parts and tools, wires or similar objects in a thickness of > 2.5 mm. Generally accessible parts.
4	Protection against ingress of solid, foreign objects in a diameter > 1 mm.	Protection against contact between live and/or internal moving parts and tools, wires or similar objects in a thickness of > 1 mm. Generally accessible parts.
5 	Protection against harmful, internal dust deposits. Ingress of dust is not entirely prevented. The quantity of dust entering must not interfere with operation (dust-protected).	Complete protection against contact with live and/or internal moving parts. Areas exposed to short-term high dust deposits.
6 	Protection against ingress of dust (dust-tight).	Complete protection against contact with live and/or internal moving parts. Generally accessible areas.

2nd digit	Protection against ingress of water	Application
0	No particular protection.	In dry areas.
1	Protection against vertically falling drops of water (protection against dripping water). Shall have no harmful effect.	In areas exposed to moisture with component in predefined vertical position (e.g. condensation water).
2	Protection against vertically falling drops of water (protection against dripping water). Dripping water falling at an angle shall have no harmful effect on equipment (enclosure) tilted at an angle of up to 15° from its normal position.	In areas exposed to moisture with component not positioned exactly vertically (e.g. condensation water).
3 	Protection against water falling at any angle up to 60° from the vertical. Shall have no harmful effect (protection against spraying water.)	Areas exposed to rain and not splashing water.
4 	Protection against water splashing against equipment (enclosure) from any direction. Shall have no harmful effect (protection against spraying water).	Areas exposed to rain and splashing water (e.g. areas exposed to passing vehicles).
5 	Protection against water projected by a nozzle against equipment (enclosure) from any direction. Shall have no harmful effect (protection against water jets).	Areas exposed to moderately powerful water jets.
6	Protection against heavy sea or powerful jets of water. Water in harmful quantities must not enter the equipment (enclosure) (protection against floodwater)	Areas exposed to heavy wash and floodwater (e.g. jetties).
7	Protection against water when equipment (housing) is immersed in water under defined conditions of pressure and time. Water must not enter in harmful quantities (immersion).	Areas washed over temporarily or covered with snow for a prolonged period.
8	Equipment (housing) is suitable for continuous immersion in water under conditions which shall be specified by the manufacturer (submersion). However, the conditions must not be any more severe than those for digit 7.	In submerged function.
9	Protected against high pressure and high water jet temperatures	Areas in which pressure washers are used

IK protection code as defined in EN 50102

The degree of protection provided by enclosures for electrical equipment against external mechanical impacts is defined by the IK code under standard EN 50102 - VDE 0470 Part 100 and EN 62262.

IK 0X

IK = Code letters (international mechanical protection)
0X = IK class of impact protection (from 00 to 10)

IK	Test	Energy in Joules
IK 00		0
IK 01		0.15
IK 02		0.2
IK 03		0.35
IK 04		0.5
IK 05		0.7
IK 06		1
IK 07		2
IK 08		5
IK 09		10
IK 10		20

Protection classes

- 

Protection class I
In the case of lights provided with class I protection, the protection aim is achieved by insulating live parts and connecting contactable metal parts to the protective-earth conductor. The protective-earth conductor connection terminal is marked with .
- 

Protection class II
In the case of lights provided with class II protection, electrical safety is ensured by means of double insulation.
- 

Protection class III
In the case of light provided with class III protection, protection is based on safety extra-low voltage (SELV).

Marks of conformity

- 

VDE mark
For electro-technical products, including products within the scope of the German Act on Equipment and Product Safety (GPSG) and medical products within the scope of the German Medical Products Act (MPG).
The VDE mark indicates conformity to VDE provisions or European- or internationally harmonised standards and provides confirmation that the protection requirements of the pertinent guidelines are met. The VDE mark shows that the product is safe in terms of electrical-, mechanical-, thermal-, toxic-, radiological- and other risk.
- 

VDE-GS mark
For technical work equipment and ready-to-use items of daily use within the scope of the GPSG (optionally instead of VDE mark for these products).
If products are technical work equipment or ready-to-use items of daily use within the scope of the German Act on Equipment and Product Safety, you can also use the VDE GS mark.
- 

The VDE EMC mark
For equipment conforming to the standards on electromagnetic compatibility.
The VDE EMC mark expresses a product's conformity with the applicable standards on the electromagnetic compatibility of products. However, this mark also signalsises the reliable operation of your product in an electromagnetic environment, because the requirements on issuing the mark automatically and unreservedly cover compliance with the relevant standards.
- 

ENEC mark from VDE / KEMA
For products meeting harmonised certification procedures.
The European standards specified in the ENEC Agreement provide the basis for testing. Products (these currently being lights, light components, low-energy lamps, IT equipment, transformers, appliance switches, electrical regulators and control devices, terminals, appliance couplers, some types of capacitor and radio interference suppression components) tested on this basis are allowed to carry VDE ENEC mark. Approval from another body involved in the European certification procedure is not necessary.
- 

VDE cable marking
The VDE cable mark applies to cables, lines and wiring conduits and -channels.
- 

Glow-wire test
Lights carrying this mark have had their external parts tested for resistance to fire and combustion with an 850°C wire in accordance with the European standard.
- CE mark**
The manufacturer documents and declares in its sole responsibility that the product marked satisfies the basic requirements of EU directives. This mark is not a mark of tested safety and quality but is directed towards the authority supervising the market.
